PROFESSIONAL SUMMARY

I am a graduate Junior Web Developer from MEST Ghana, where I studied programming languages such as HTML, CSS, JavaScript, and Tailwind CSS. I also learned to use React, an open-source JavaScript library, to build dynamic and interactive user interfaces for websites. I graduated on April 28th, 2025, and I completed my internship training at Everything IT Technologies in Accra, where I applied my skills in a real-world setting. I participated in a fully remote opportunity over a two-month period, during which I gained valuable experience in professional communication and virtual collaboration. Throughout this time, I learned how to effectively engage with others in a remote setting, adapt to digital communication tools, and maintain productivity without direct supervision. The experience helped me build confidence in navigating virtual environments, improved my interpersonal skills, and taught me the importance of clarity, responsiveness, and initiative when working remotely.

I worked as a personal assistant from January 2024 to July 2024, where I performed my role as an assistant diligently.

Lastly, I had a training in my health background at the RIDGE hospital as a Diagnostic Radiographer from November 2022 to November 2023.

In addition to my primary career pursuits, I independently manage a small clothing business, which I founded out of a passion for fashion and entrepreneurship. This venture has allowed me to develop practical skills in business management, customer relations, and marketing. Balancing this business alongside my main responsibilities has strengthened my ability to multitask, stay organized, and remain goal-oriented. Through this experience, I have gained valuable insights into running

a business, from handling inventory and overseeing day-to-day operations to engaging with customers and promoting products through various channels.

My career goal and aspiration is to become a full stack developer. I have decided to channel my career into Information Technology because of my passion for problem-solving, continuous learning, and the opportunity to create innovative solutions that can have a positive impact on users and businesses alike.

To explore AI-driven web development, focusing on creating intelligent and adaptive user interfaces. I also plan to acquire certifications in AWS cloud computing, Digital marketing and Cyber security, to elevate my usefulness in the tech space.

EXPERIENCE

Internship at Everything IT technologies

- Learnt to use NEXTJS framework
- Incorporating backend API in NEXTJS
- Problem solving and paying attention to details
- Working with teams and improved communication skills

Personal assistant | January 2024 to July 2024
